

ABSTRACT

Disclosed is a fluorescent lamp, which can remove an irregular arrangement of fluorescent lamp holders and prevent break-off of illumination generated at spaces formed between
5 connected fluorescent lamps when the fluorescent lamp holders are arranged in series. The fluorescent lamp includes a tubular lamp body (21); auxiliary tubes (23) extending from both side ends of
• the tubular lamp body (21); and connection terminals(22) formed inwardly at both side ends of the auxiliary tubes(23). A variety
10 of fluorescent lamp holders for allowing the use of the fluorescent lamp are provided.
